Payroll Audit System – $4,000.00

Audit the data in your payroll database and payrolls BEFORE they are processed. Reduce your correction payroll runs by up to 80%!

The Payroll Audit System assists the payroll service bureau in "scrubbing" your payroll data before and after payroll processing. This helps reduce the need for correction payroll runs, tax problems and a variety of other issues. The system consists of two main parts: Scheduled Audits and Pre-Process Audits.

MANAGEMENT CONSOLE

The majority of the Audit System management is accessed via a separate management console. Add/edit/remove audits. View reports on audit status, who is getting which audits and when, etc. Archive/purge log data.

SCHEDULED AUDITS

The Scheduled Audits are SQL queries that are run against the payroll database and the results emailed to specified recipients on a customizable schedule. These audits are completely customizable to allow for an infinite amount of possibilities. (Example: List companies with an incorrect tax setup.) Run audits daily, weekly, monthly, quarterly, yearly or even all throughout the business day. Any of the audits in the system can also be run manually (ad-hoc). The audits generate HTML tabular formatted emails to desired recipients and are easy to read and appealing to the eye. Audits may be set to be formatted as "alerts", using bold and noticeable colors.

UNLIMITED NUMBER OF AUDITS

The system comes preconfigured with over 100 unique audits, ranging from invalid employee birthdates to missing taxes on W2 employees. These reports can help fulfill SASE-16 audit requirements.

FULLY CUSTOMIZABLE

All of the audits performed by the Audit System are written in standard T-SQL code. Therefore, changes to audit parameters are easily made. For those experienced in SQL, fully custom audits can be written to analyze data in any of the payroll database tables.

PRE-PROCESS AUDITS

The Pre-Process Audit portion of the system provides a customized "Payroll Submit" screen in the payroll system which executes special SQL queries against the payroll. When users local to the service bureau (CSR's, Citrix users, etc.) enter the submit screen, the system automatically audits the payroll based on parameters that you define. (Example: W2 employees missing taxes, paycheck is over a certain amount threshold.) Preprocess audits can be configured to be mandatory or approvable. For mandatory audits, the item must be corrected before they are allowed to submit the payroll. For approvable audits they are given an "Approve" button which logs the user and time that they have approved it. Approvable audits can be assigned roles from the payroll system to allow only users in those roles to approve those audits. For remote clients, you can run the audits on the payroll before it is processed by using the customized Job Requests screen. If any audits fail, the payroll can be opened, corrected and re-submitted. This process will greatly reduce your correction payroll runs and tax department issues at quarter and year end.

Employee Import – $1,500.00

Customize an employee import from a client's data file.

The Employee Import allows you to import new employees, update existing employees and import/update employee information in the payroll database from customizable, preconfigured Excel template files. Virtually any employee data can be imported/updated, from demographics to taxes to HR tables. Multiple levels of validation occur before an import can take place. (Example: When importing deductions, earnings and taxes the utility verifies that the items exist on the company level before allowing the import to proceed.) This helps prevent "bad" data from being imported into the payroll system. The utility can also be used for quick manual batch entry of employee data instead of using the new hire screen in the payroll system.

Company Import – $1,500.00

Customize a company import from a client's data file.

The Company Import allows you to convert a new company, import new or update existing company level items in the payroll database from customizable, preconfigured Excel template files. Multiple levels of validation occur before an import can take place. (Example: When importing deductions, the utility verifies that dependent items, such as the agencies or calc codes, exist on the company before allowing the import to proceed.) This helps prevent "bad" data from being imported into the payroll system. The utility can also be used for quick manual batch entry of company data instead of using the screens in the payroll system.

Efficient Forms to Millennium 3 Interface - $1,500.00

Automatically import newly on-boarded employees into Millennium 3.

The Efficient Forms to Millennium 3 Interface imports new employees from XML files delivered through Efficient Form's EFConnect service. EFConnect is a Windows Service application that can be obtained from Efficient Forms.

W2 Export - $1,000.00

Export W2s to PDF.

The W2 Export utility allows you to export all W2s for a selected company and specified tax year to a designated folder on your computer or network.

MAG File Analyzer – $750.00

Compare the contents of your MAG files to the payroll database...

The MAG File Analyzer compares the contents of MAG (Magnetic Media) files generated from the payroll system to what the payroll database actually contains. It looks for discrepancies in totals reported on the file as well as the companies expected to exist on the file. Currently the analyzer will process the following MAG file types: W2, Oklahoma SUI, Kansas SUI, New Mexico SUI, Tennessee SUI and Texas SUI.

SSN Verification Utility – $750.00

Interpret Social Security number verification return files from the SSA.

This is useful if your service bureau is verifying Social Security numbers for your clients. Dump your SSA file to a folder and have an automated script parse it and send out emails to your clients. No more manual effort! It reads the SSA return file and generates a customizable email from the payroll database to notify your clients of possible SSN errors for their employees.

Calendar Utility – $500.00

Change a calendar date or batch details. ..

This utility will allow you to pull in an existing calendar date and change it to a new date without deleting and adding new calendar dates in payroll. The helps prevent unscheduled payrolls. It also allows you to modify pay period dates on the associated batches at the same time.

IRS Filing Status Utility - $500.00

Verify your clients' FITW filing statuses.

The IRS Filing Status Utility allows you to compare the filing status download file provided by the IRS to the status in the Millennium database. A report is produced showing any discrepancies.

Misc. Checks Utility – $500.00

Change the due date of a tax deposit.

When a secondary payroll is processed that reaches the 100K liability and is created with the incorrect due date, simply put the tax deposits on hold, open the Tax Checks utility and change the due dates to modify amounts on the tax deposit. Also, allows for modifying amounts on agency checks.
